

We're Hiring Fresh Graduates to Build the Future of Trusted AI

ROLE: Junior AI Data Engineer (Fresher)

At **SDQaaS**, we are building a new category at the intersection of **Data Quality, AI Security, and Responsible AI**.

Our mission is simple but critical: **make AI training data safe, fair, and trustworthy**.

We're launching a **Graduate & Fresher Hiring Program (2025/2026 batch)** for engineers who want to work on **real production systems**, not toy projects.

Location: Remote-friendly

Who Can Apply

- **Education:** B.Tech / BCA (CS, IT, Data Science, AI-ML, ECE or related)
- **Graduation:** 2025 / 2026 (Final-year students & freshers welcome)
- **GPA:** 6.5+ preferred (not a disqualifier)
- **Mindset:** Curious, analytical, problem-solver, eager to learn

Core Skills We Look For (Across Roles)

Technical Foundation

- Python basics (loops, functions, libraries)
- SQL fundamentals (SELECT, WHERE, JOIN, GROUP BY)

What You'll Do

- Build and automate data pipelines using Python (Pandas), SQL, Apache Airflow, and dbt for cleaning, validation, and orchestration.
- Implement data quality checks, anomaly detection (e.g., Isolation Forest, LOF), and validation tools like Great Expectations to handle duplicates, nulls, schema mismatches, and anomalies.
- Detect and mitigate AI threats, including data poisoning, adversarial attacks, deepfakes, and synthetic data manipulation, while building threat scoring and alerting systems.
- Audit datasets for bias (gender, age, demographics), compute fairness metrics (demographic parity, equalized odds), and create bias dashboards/reports for compliance with regulations like EU AI Act and GDPR.
- Develop backend APIs (FastAPI/Flask), scalable databases (PostgreSQL, Snowflake), and monitoring solutions (Prometheus, Grafana) on AWS/GCP infrastructure.
- Own end-to-end production pipelines, research emerging AI trends, and collaborate with stakeholders from day one. Basic proficiency in Python, SQL, and cloud platforms (AWS/GCP).
